Product Application Manual

Company Profile

DBV Valve Co., Ltd. was established in 2001 and is headquartered in Oubei, Yongjia, Zhejiang, the hometown of pumps and valves in China. It is a modern enterprise integrating the manufacture, sales and service of various intelligent control valves (pneumatic, electric and hydraulic control). We have a factory building area of more than 20,000 square meters, more than 200 sets of machine equipment and more than 300 employees.

The company has been awarded the titles of National High-Tech Enterprise, A-class Tax Credit Enterprise of Zhejiang Province, and Star Enterprise of Yongjia County, etc. It has also been certified by American Petroleum Institute (API), Customs Union TR Declaration (EAC), German Technical Supervision Association (TUV) and Det Norske Veritas (DNV).

The company mainly produces high pressure severe service products and metal to metal seat butterfly valves, metal to metal seat ball valves, low temperature valves, etc., which are manufactured strictly according to ISO, ANSI, API, GB, HG and other standards. We have advanced physical and chemical testing centre, professional CNC machining and test pressure automatic production equipment and experienced technical production team. Product pressure from 150LB-2500LB, 0.6 MPA-42.0MPA, temperature resistance -196°C - 800°C.

Choose Us For Quality

Relying on our strict quality management system, our products are widely used in petroleum, petrochemical, natural gas, coal chemical, metallurgy, electric power and other industries, and exported to Europe, America, Asia Pacific, the Middle East and other countries and regions, the company has been approved by Oman National Oil Company, Iran South Oil Company, Thailand National Power Plant, Russia National Oil Service and other large international terminal customers.

In terms of research and manufacturing, the company has a number of senior R & D teams, advanced manufacturing equipment, perfect physical and chemical testing and inspection methods (spectrometer, helium mass spectrometer, high and low temperature comprehensive performance test equipment, etc.), scientific information management system (integrated PDM, ERP, CAD, CAPP), comprehensive resources to provide customers with sustainable product solutions and collaborative service support.

As a fluid control solutions provider, the company is committed to innovation and service enhancement and is constantly striving to become one of the world's most professional, comprehensive and reliable valve manufacturers.

# Equipment & Professional Team

Equipment & Professional Team

More Than 20 Years Of Experience In R&d And Production Exported To More Than 30 Countries And Regions Worldwide.

200 + Sets Of Intelligent Manufacturing Equipment	20 + Years Of Experience In R&d And Production	Exported To 30 + Countries Worldwide
4000 + Square Metres Of Finished Goods Warehouse	Over 300 Valve Practitioners	3 Valve Production Bases
Annual Production Of Over 8000 Tons Of Valves	3 Senior Valve R&d Teams	Intelligent And Scientific Production
20,000 + Square Metres Of Factory Floor Space	Professional Multilingual Sales Staff	.....

# Customers & Partners

Customers & Partners

DBV Valve Co., Ltd. is a fluid control solution provider that has been developing and producing ball valves and butterfly valves in China for more than 20 years. Our sales and service network extends to dozens of overseas countries and regions, and our end products are used by companies such as Petronas, Anadarko, Petrobras, Lukoil.

The company has been approved as a qualified supplier by large international terminal customers such as Oman National Oil Company, Iran National South Oil Company, Thailand National Power Plant and Russia National Oil Company.

# Honors & Qualifications

## Honors And Qualifications

Qualification is the guarantee of an enterprise's products, and honour is the silent motivation of an enterprise.

In terms of product standards and quality, the company has obtained the "API6D, API609 Valve Production Design Standard Certification" issued by the American Petroleum Institute API, the "API6FA/API607 Valve Fire Test Certificate", the "SIL-3 Safety Equipment Integrity Level Certificate" issued by the German Technical Supervision Association TUV, the CE Certificate, the "ATEX Explosion Test Certificate" issued by the Norwegian Classification Society DNV and many other international certifications.

The company was awarded the title of national high-tech enterprise, the title of science and technology-based small and medium-sized enterprise in Zhejiang Province, the title of star enterprise in Yongjia County for three consecutive years, the excellent supplier of government procurement and many other honorary titles.

DBV valves are manufactured in accordance with the ISO 9001 quality management system and are subject to 48 production processes, comprehensive testing and inspection in accordance with international standards, thus guaranteeing the high quality of DBV valves.

DBV Certificates

API 6D	API 609	CE
ISO 9001	ISO 45001	ISO 14001
API 6FA/607	ISO 15848-1/API624	BS 6364
SIL-3 Ball Valve	SIL-3 Butterfly Valve	SIL-3 Control Valve

MSK-64 Ball Valve	MSK-64 Butterfly Valve	ATEX

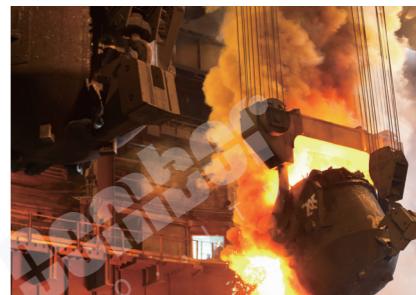

# Multi-Field Application Solutions

Multi-Field Application Solutions

Since its inception, DBV Valve has always been deeply involved in the valve field, with scientific and cutting-edge R&D and production processes, providing reliable, safe and economical fluid control solutions to customers worldwide in a variety of industries. With years of customization of fluid control solutions, DBV Valve has developed and produced a series of valves for various industries worldwide, including but not limited to: fine chemical industry, coal chemical industry, marine industry, new energy field, oil refining and petrochemical industry, metallurgical and mining industry, pharmaceutical and pesticide industry, nuclear power industry .....

## Industry-wide, Multi-type Fluid Control Solutions

Fine chemical industry	New Energy Sector	Pharmaceutical And Pesticide Industry
Coal chemical industry	Oil Refining And Petrochemical Industry	Nuclear Power Industry
Marine Marine Industry	Metallurgical And Mineral Industries	Technology And Environmental Industry

## DBV FLOATING BALL VALVE SERIES

DBV Series Floating Ball Valves are a prime example of reliability, performance, manufacturing and superior engineering techniques at work. Featuring a uni-body or two-piece bolted design.

### GENERAL DESIGN FEATURES

- NACE MR0175-(ISO 15156)  
(Stainless Steel ball/stem configuration)
- Blowout proof stem
- Weather Seal (Class 600 and higher)
- Actuator mounting pad(4 bolt machined)
- API 6D
- API 607 4th Edition (O-Ring&Graphite)
- Secondary Metal-to-Metal Sealing
- Full rated bi-directional dead end service
- Antistatic Device
- Lockable handle (optional)
- O-Ring design (standard)
- Graphite or Teflon packed (optional)

### APPLICABLE STANDARDS

#### API-American Petroleum Institute

- Spec.6D Specification for pipeline valves.  
Spec.RP6F Recommended practice for fire testing valves.  
Std.598 Valve inspection and test.  
Std.607 Fire test for soft seated quarter-turn valves.

#### ASME/ANSI-American National Standard

- B16.5 Steel pipe flanges and flanged fittings.  
B16.10 Face-to-face and end-to-end dimensions of ferrous valves.  
B16.34 Steel valves-Flanged and butt welding ends.

#### Ec-European Community

CE Marked (P.E.D. 97/23/EC,Cat.3)

#### ISO-International Org.for Standardization

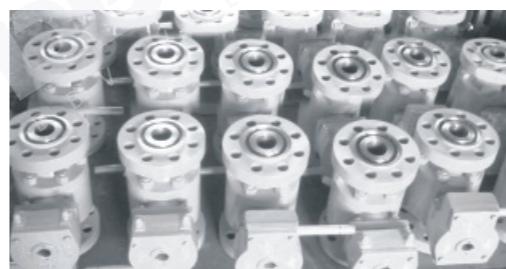

- ISO 9001: Quality systems-Model for quality assurance in design/development, production, installation and servicing.  
ISO 15156 Materials for use in H2S containing environments in oil and gas production.

#### MSS-Manufacturers Standardization Society

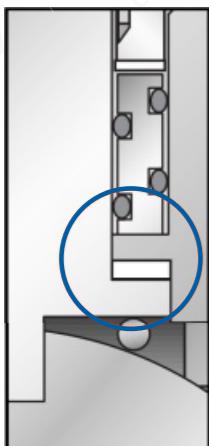

- SP 6 Std.finishes for contact faces of pipe flanges and connecting- end flanges of valves and fittings.  
SP 25 Standard marking system for valves, fittings, flanges and unions.  
SP 44 Steel pipeline flanges.  
SP 55 Quality standard for steel castings visual method.

#### NACE-National Assoc. of Corrosion Engineers

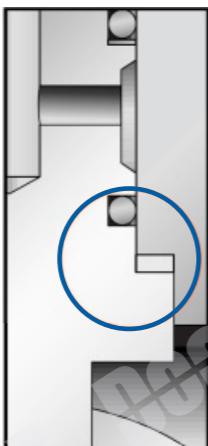

- MR 0175 Sulfide stress cracking resistant metallic materials for oilfield equipment. (Superseded by ISO 15156)

## DBV FLOATING BALL VALVES DESIGN FEATURES

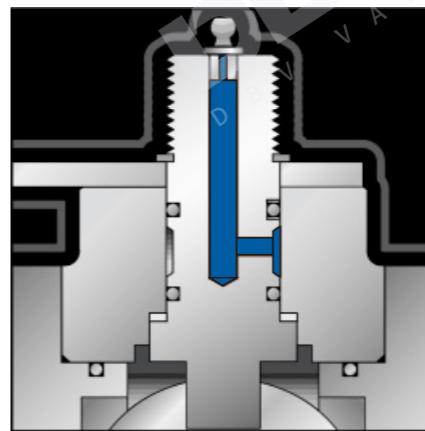

Class 150 & 300

Class 600 & higher

### BLOWOUT PROOF STEM.

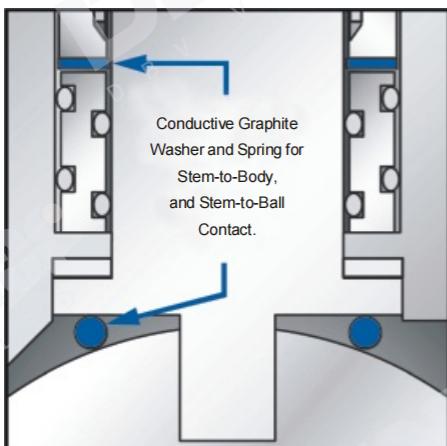

Internally inserted, "backseated" stem assures fire safety and blow-out prevention by retaining stem in the valve at all pressure.

Class 600 & higher

### STEM JOURNAL LUBRICATION

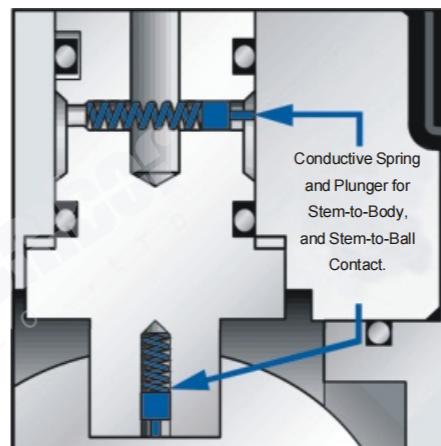

All valves incorporate external stem lubrication. A vented weather seal allows safe pressure relief in the event of excessive grease gun pressure

Class 150 & 300  
(O-Ring shown, packing also available.)

### ANTISTATIC DEVICE

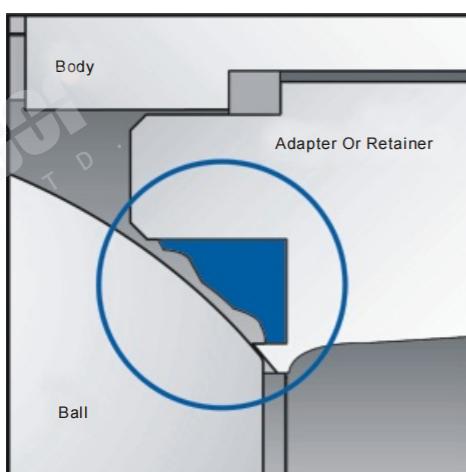

A conductive spring and a graphite washer provide antistatic continuity throughout the valve.

Class 600 & higher

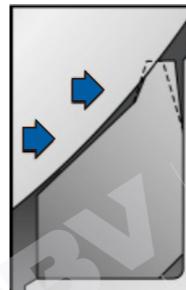

### ANTISTATIC DEVICE

1" bore-4" bore, CL.600,900 & 1500 use spring-loaded pins between the ball, stem, and body to provide antistatic continuity throughout the valve.

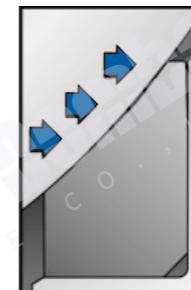

### FIRESAFE SEAT SEALING

In the event of fire and seat destruction, ball floats downstream to effectively provide metal-to-metal seat sealing.

Low Pressure Sealing

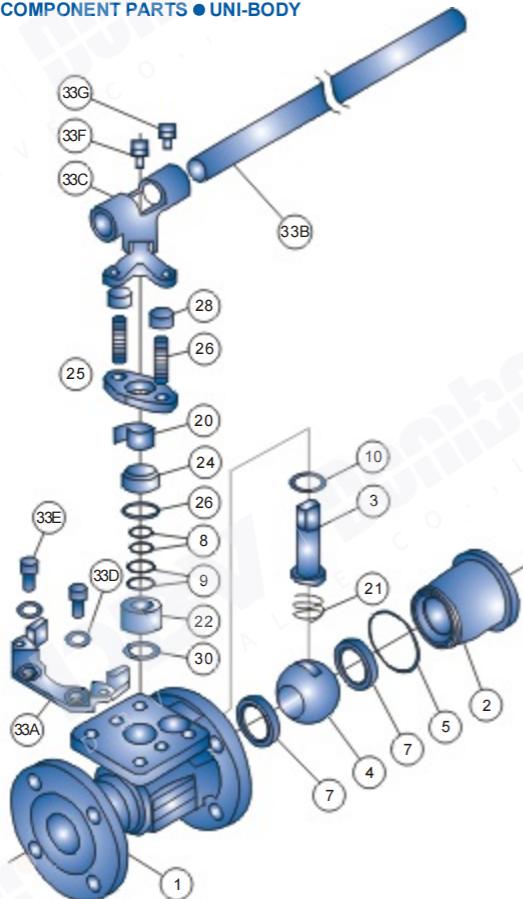

High Pressure Sealing

Positive Low & High Pressure Sealing

A special integral seat lip provides positive low pressure "bubble-tight" sealing between the ball and seat with minimal operating torque. The DBV seatlip deflects slightly at higher pressures to ensure full seat contact with the ball. The seat's "memory action" provides "bubble-tight" sealing at both low and high pressures. This "self compensation for swell" feature results in low torque and long life operation.

## METHOD OF CALCULATING FLOW

The Flow Coefficient "Cv" of a valve is the flowrate of water (gallons/minute) through a fully opened valve, with a pressure drop of 1psi across the valve. To find the flow of liquid through valve from the Cv. use the following formulas:

Liquid Flow

 $Q_L = \text{flow rate of liquid (gal./min.)}$  $\Delta P = \text{differential pressure across the valve (psi)}$  $G = \text{specific gravity of liquid (for water, } G=1\text{)}$ 

$$Q_L = Cv \sqrt{\frac{\Delta P}{G}}$$

Gas Flow

 $Q_g = \text{flowrate of gas (CFH at STP)}$  $P_2 = \text{outlet pressure (psia)}$  $g = \text{Specific gravity of gas (for air, } g=1.000\text{)}$ 

$$Q_g = 61Cv \sqrt{\frac{P_2 \Delta P}{g}}$$

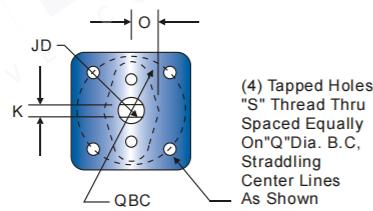

For non-critical flow

$$\left\{ \frac{\Delta P}{P_2} < 1.0 \right\}$$

## Ball Valve

### DBV THREADED, WELDED & GROOVED-END FLOATING BALLVALVES GENERAL DESIGN FEATURES

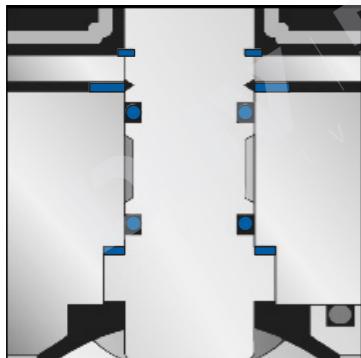

#### STEM JOURNAL LUBRICATION

Valves that utilize an external stem lubrication fitting also incorporate a vented weather seal which allows safe pressure relief in the event of excessive grease gun pressure.

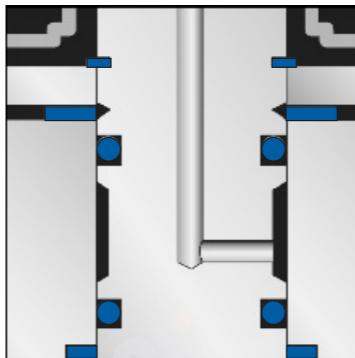

#### FIRESAFE DESIGN/CERTIFIED

Upon destruction of the seat (in the event of a fire) the ball floats downstream to provide metal-to-metal contact behind the seat area. Pressure assisted shut-off prevents fire feeding leakage.

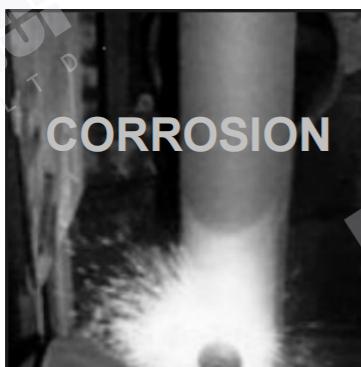

#### BLOWOUT PROOF STEM

Internally inserted "back-seated" stem assures fire safety and blowout prevention by retaining stem in the valve at all pressures.

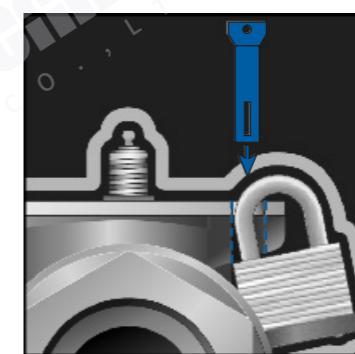

#### WEATHER SEAL

Weather seals are utilized in most DBV Ball Valves to effectively eliminate stem journal corrosion, abrasion and galling. (Optional)

#### FIGHT THE COST OF CORROSION

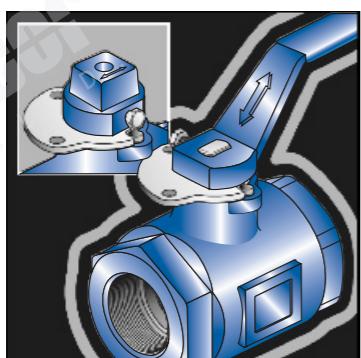

Prolong the life of your Valves by reducing corrosion with anti-corrosive Coating. Consult factory for more information.

#### SECURE YOUR INVESTMENT

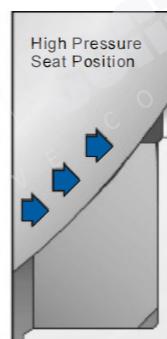

A majority of the Threaded/Grooved Ball Valves come standard with an integral locking ear to prevent unauthorized operations.

\*Padlocks not included.

#### STANDARD HANDLE, STEM WRENCH AREA

DBV Ball Valves are equipped with durable handles as a standard feature. Valves can also be provided with square nut assemblies. The heavy-duty flattened stem design allows usage of standard wrenches when necessary to conserve space and prevent accidental operation.

#### LOW PRESSURE SEAT POSITION

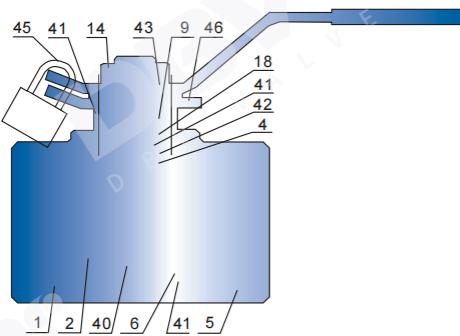

An integral seat lip provides positive low pressure "bubble-tight" sealing of ball and seat. The assembly preload insures constant surface load of ball to seat with minimal operating torque.

#### HIGH PRESSURE SEAT POSITION

The DBV seat lip deflects slightly at higher pressures to ensure full seat-to-ball contact. The seat's "memory-action" provides bubble-tight sealing at low and high pressures. This "selfcompensation for swell" feature results in low torque and long life operation.

**2PCS FORGED STEEL BALL VALVES**

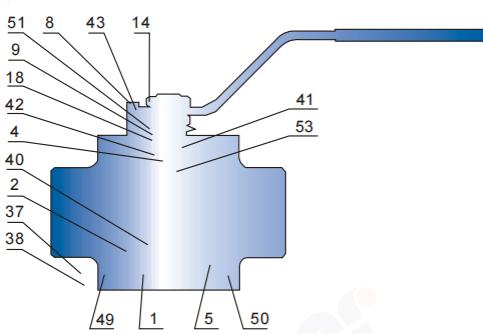

- Internal Entry Stem
- Handle With Slide Lock (Optional)
- ISO 5211 DirectMount  
Actuator Mounting Pad (Optional)
- Body Seals For High Temp & API 607 Applications
- Forged Carbon or Stainless Steel Floating Ball Valve
- Two Piece Split Body, Available in Standard or Full Port
- Ends Connections in Threaded NPT, Socket Weld, Butt-weld, NPT x S.W, NPT x B.W
- Designed & Manufactured to BS5351, MSS-SP-118

# Ball Valve

## TWO PIECE TRUNNION BALL VALVES

The DBV two-piece split body trunnion mounted ball valve conforms to API 6D, ASME B16.34 and ASTM specifications. All seats are retained in metal holders which are spring-loaded against the ball for low pressure, fire safe sealing.

### GENERAL DESIGN FEATURES

- Double block and bleed
- Anti blowout stem design
- O-rings plus fire safe packing prevents leakage
- Corrosion resistant low friction bearings
- Inconel wave springs to provide upstream and downstream sealing
- Stainless Steel Sealant injection fittings for emergency stem or seat sealing
- Minimized torque required to open and close valve
- Antistatic grounding between ball, stem/trunnion and body
- Integral top works direct mounting pad

### FIRE SAFE FUNCTION

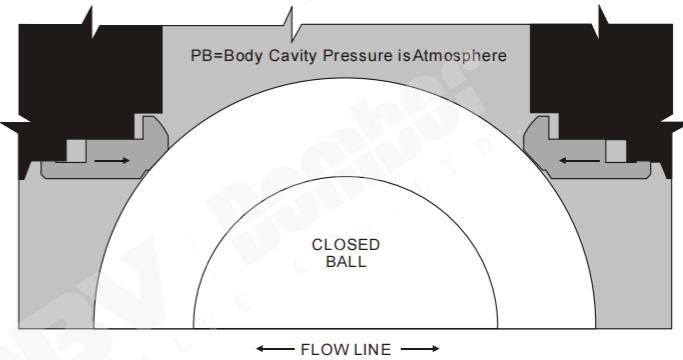

In case of fire and seat construction damage, fire safe requirements are accomplished with automatic metal-to-metal positive sealing.

### SELF RELIEVING SEAT DESIGN

**Upstream Seat:** The difference in the area ( $D_1$ ) times the line pressure creates a "piston effect" which forces the seat against the ball surface. Also the springs behind the seat add the force to the seat which keeps the seat in contact with the ball surface by providing the tight seal.

**Downstream Seat:** When the body cavity pressure exceeds the spring pressure, automatic pressure relief will occur by relieving the body cavity pressure past the downstream seat. This eliminates the need for the body relief valve.

Open Vent(Bleed Valve) to Atmosphere for Seat sealing confirmation

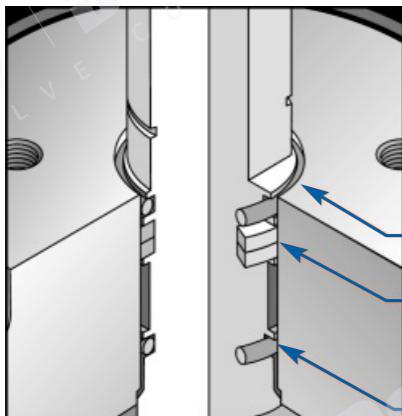

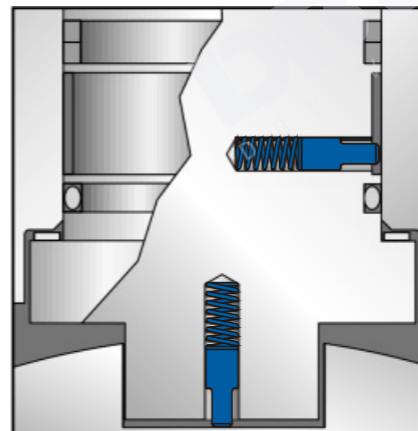

### DOUBLE BLOCK AND BLEED

The double block and bleed condition is available in all seat design configurations. When the ball is in the closed position the body cavity pressure may be drained down to 'zero' by opening the bleed valve and draining the fluid by removing the drain plug. Each seat works independently assuring tight shut off seal against ball on the upstream and downstream side.

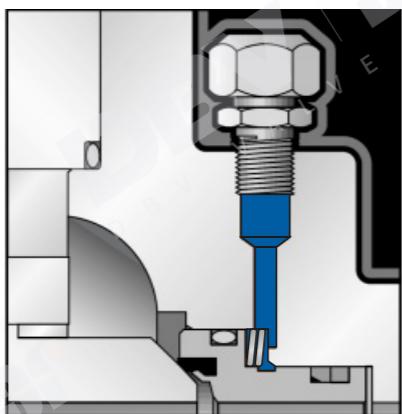

### AVAILABILITY & MAXIMUM PRESSURE RATING, ASME B16.34 & API 6D

**DESIGN FEATURES****FIRE SAFE STANDARD DOUBLE SEAL****ANTISTATIC DEVICE\***

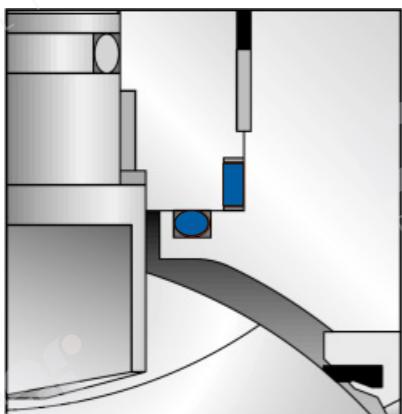

A Stainless Steel grounding plunger between the body/stem and stem/ball permits electrical continuity.

**EMERGENCY SEAT SEAL**

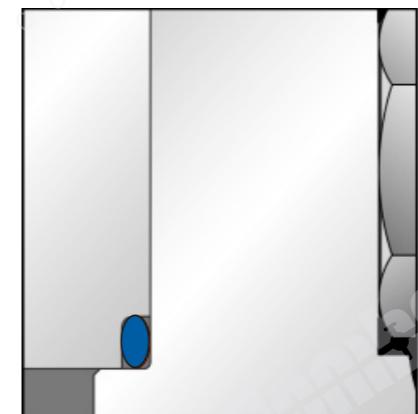

Special sealants may be injected into fittings that are located on the adapter flanges to restore sealing integrity if seat sealing surface is damaged.

**EMERGENCY SEALANT INJECTION SYSTEM**

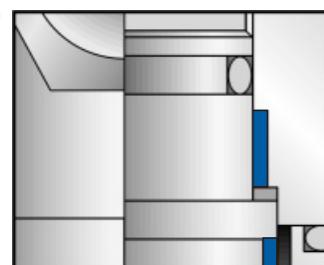

The Sealant Injection System Located on the body can be utilized in case of emergencies. O-ring damage, or if stem leakage occurs.

**DOUBLE SEALED ENVELOPE CONNECTIONS 2"-4" BORE**

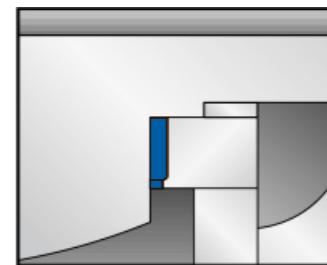

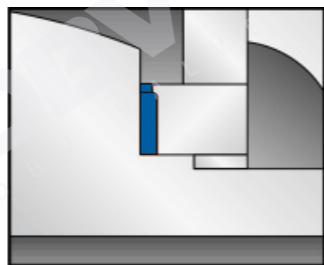

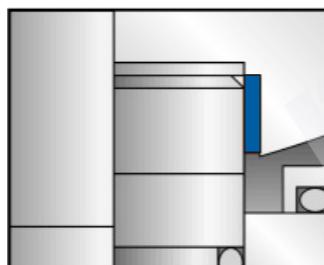

A combination of an o-ring and Firesafe gasket ensures a positive seal.

**BODY/ADAPTER SEAL CONNECTION 6"-12" BORE**

An o-ring on this connection ensures a positive seal.

**HEAVY DUTY BEARINGS**

2"-4" bore.

Teflon and glass liner with 316SS housing integral trunnion with trunnion blocks. 6"-12" bore.

Heavy duty bearings balance the pressure load on the ball by reducing friction between ball and seat resulting in smooth and easy operation of valve.

# Ball Valve

## APPLICABLE STANDARDS

The following list contains the most important applicable standards for ball valves. DBV valves may be designed,

### API-American Petroleum Institute

- Spec.6D Specification for pipeline valves,
- Spec.RP6F Recommended practice for firetesting of valves,
- Spec.6FA Specification for fire testing of valves,
- Std.598 Valve inspection and test.
- Std.607 Fire test for soft seated quarter-turn valves.

### ASME/ANSI-American National Standard

- B 16.5 Steel pipe flanges and flanged fittings.
- B 16.10 Face-to-face and end-to-end dimensions of ferrous valves.
- B 16.25 Butt welding ends.
- B 16.34 Steel valves-Flanged and butt welding ends.
- B 31.3 Chemical plant and petroleum refinery piping
- B 31.4 Liquid petroleum transportation piping systems.
- B 31.8 Gas transmission and distribution piping systems.

### British Standard

- BS1503 Specification for steel forgings for pressure purposes.
- BS1504 Specification for steel castings for pressure purposes.
- BS1560 Steel pipe flanges and flanged fittings.
- BS2080 Face-to-face, center-to-face, end-to-end, and center-to-end dimensions of flanged and butt-welding end steel valves for the petroleum, petrochemical and allied industries.
- BS4504 Flanges and bolting for pipes, valves and fittings

Manufactured and tested in accordance with other international standards on request.

### British Standard-cont

- BS 5146 Inspection and test of steel valves for the petroleum, petrochemical and allied industries.
- BS 5351 Steel ball valves for the petroleum, petrochemical and allied industries.
- BS 5750 Quality system.
- BS 6755 Testing of valves.

### EC-European Community

CE Marked (P.E.D.97/23/EC.Cat.3)

### ISO-International Organization for Standardization

ISO 9001:2000 Quality systems-Model for quality assurance in design/development, production, installation and servicing.

### MSS-Manufacturers Standardization Society

- SP 6 Standard finishes for contact faces of pipe flanges and connecting-end flanges of valves and fittings.
- SP 25 Standard marking system for valves, fittings, flanges and unions.
- SP 55 Quality standard for steel castings-visual method.

### NACE-National Association of Corrosion Engineers

- MR 0175 Sulfide stress cracking resistant metallic materials for oil field equipment.

\*Torque listed is calculated for "clean wet service"  
use 1.22 multiplier to this to calculate for "dry gas service".

Note: (1) Torques are actual and based on maximum differential  
low temperature service, without safety factors.

(2) DBV recommends adding a 25% safety factor for pneumatic  
and 50% for electric actuators

(3) Differential pressure "P" in torque expression is in PSI.

Pressure ratings according to API 6D:

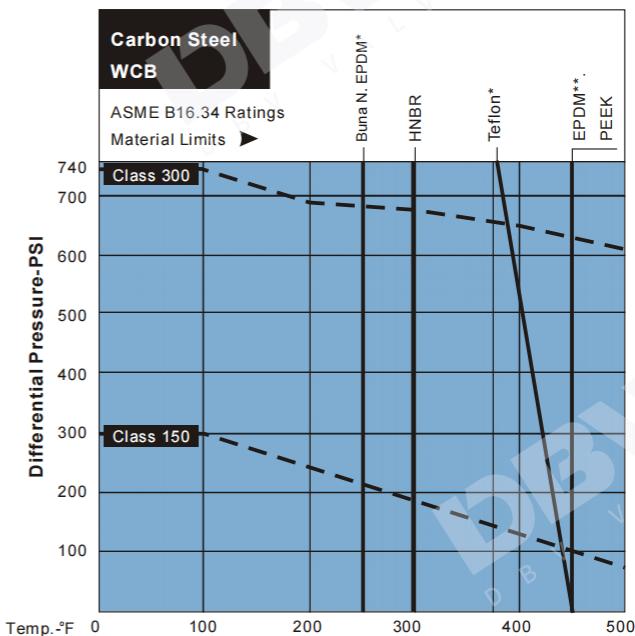

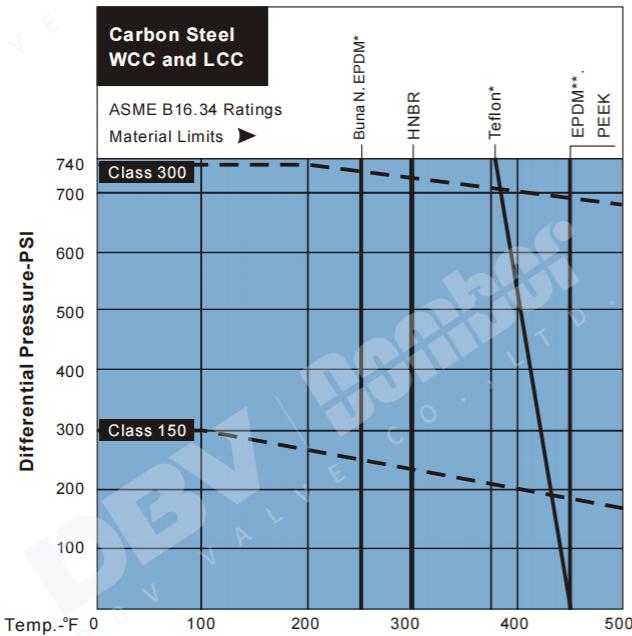

Class 150 P=285 psi

Class 300 P=740 psi

## METHOD OF CALCULATING FLOW

The Flow Coefficient "Cv" of a valve is the flow rate of water (gallons/minute@60° F) through a fully opened valve, with a pressure drop of 1psi across the valve. To find the flow of liquid or gas through a valve from the Cv. use the following formulas:

### LIQUID FLOW

QL= flow rate of liquid (gal./min.)

△P= differential pressure across the valve (psi)

G= specific gravity of liquid (for water, G=1)

$$QL = Cv \sqrt{\frac{\Delta P}{G}}$$

### GAS FLOW

Qg = flow rate of gas (CFH at STP)

P<sub>2</sub> = outlet pressure (psia)

g = Specific gravity of gas (for air, g=1.000)

$$Qg = 61Cv \sqrt{\frac{P_2 \Delta P}{g}}$$

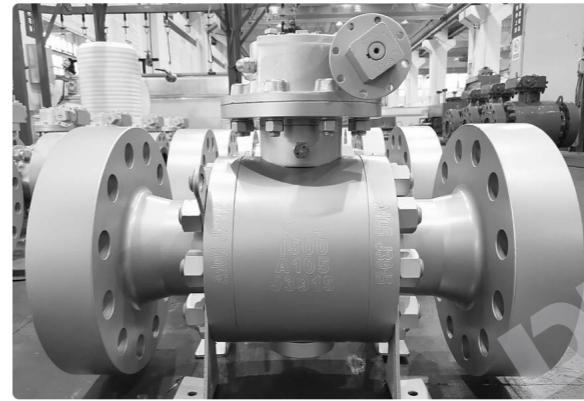

For non-critical flow  
 $\left\{ \begin{array}{l} \Delta P < 1.0 \\ P_2 \end{array} \right\}$

### THREE PIECE TRUNNION MOUNTED BALL VALVES

A large trunnion design ensures central positioning under the highest working pressure. Independent floating spring loaded seat provide a tight seal even at low differential pressures. Service and maintenance is simplified with a bolted body design incorporating Double o-rings or a combination of o-rings and gaskets. Suitable for buried or above ground installation.

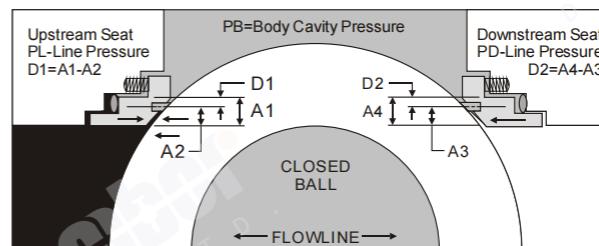

### GENERAL DESIGN FEATURES

- Three-piece body design
- Double block and bleed
- Trunnion supported design reduces operating torque
- Antistatic device for grounding of the ball, stem and body
- Two sets of O-rings plus fire safe stem packing prevents leakage
- Corrosion resistant low friction bearings
- Inconel seat springs
- Sealant injection fittings for emergency system or seal sealing
- Direct mount top works pad for actuator or gear operator
- API Spec. 1, 6D, 6FA and 607
- ASME Section III Div.1-NCA 4000
- BS 5351, 5750 and 6755
- Locking device upon request
- NACE MR0175/ISO 15156
- Anti-blownout trunnion stem design

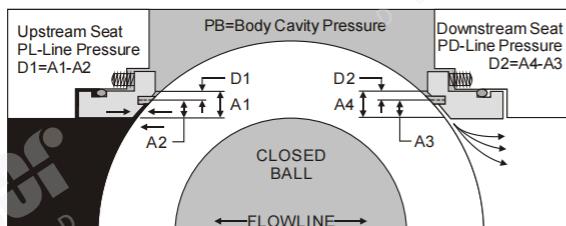

### TECHNICAL SEATING FEATURES DOUBLE PISTON SEAT DESIGN

**Upstream Seat:** Line Pressure acting on the seat area (A1) does not equalize against the line pressure acting on the seat area (A2). The difference in the area (D1) times the line pressure creates a "piston effect" force which pushes the seat against the ball surface resulting in a tight effective seal.

**Downstream Seat:** When the body cavity pressure is greater than the downstream pressure, the body cavity pressure acts on the seal area (A4). The net pressure difference, acting over area (D2), pushes the downstream seat tightly against the ball creating a positive seal.

### DOUBLE BLOCK AND BLEED

The double block and bleed condition is available in all seat design configurations. When the ball is in the closed position the body cavity pressure may be drained down to 'zero' by opening the bleed valve and draining the fluid by removing the drain plug. Each seat works independently assuring tight shut off seal against ball on the upstream and downstream side.

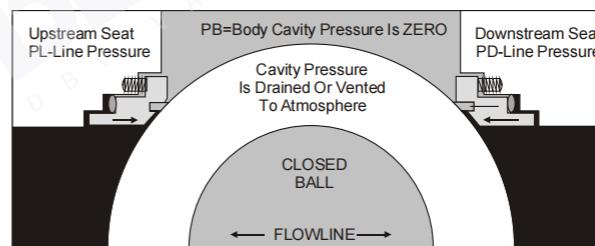

### THE ULTIMATE BENEFIT OF USING THE "DOUBLE PISTON SEAT"

**Design:** In case of upstream seat leakage, the downstream seat maintains a pressure assisted tight shut off by sealing against the ball surface.

### SELF RELIEVING SEAT DESIGN

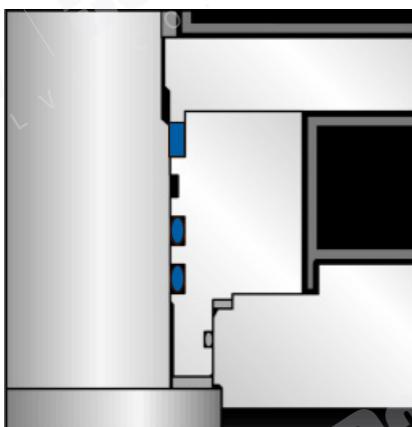

**Upstream Seat:** The difference in the area (D1) times the line pressure creates a "piston effect" which forces the seat against the ball surface. Also the springs behind the seat adds the force to the seat which keeps the seat in contact with the ball surface by providing the tight seal.

**Downstream Seat:** When the body cavity pressure exceeds the spring pressure, automatic pressure relief will occur by relieving the body cavity pressure past the downstream seat. This eliminates the need for the body relief valve.

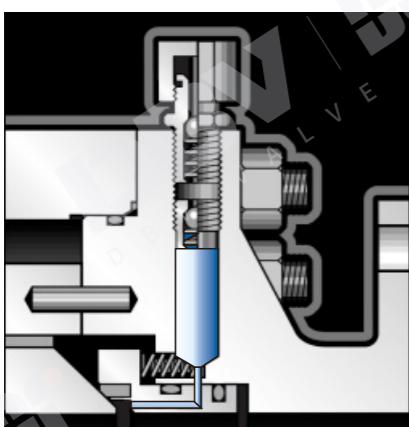

## Ball Valve

### DESIGN FEATURES

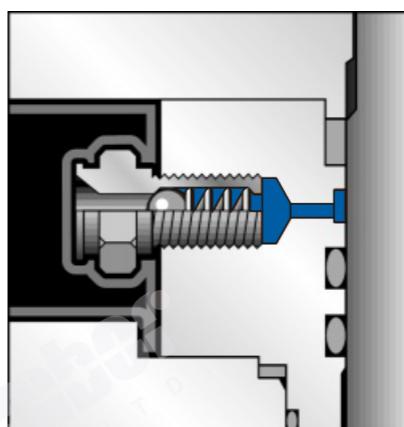

#### ANTI-BLOWOUT STEM DESIGN

Stem seal integrity is achieved by the use of three o-rings (or two o-ring and graphite gasket). Upper o-ring (or graphite gasket) can be replaced with the valve inline and under pressure.

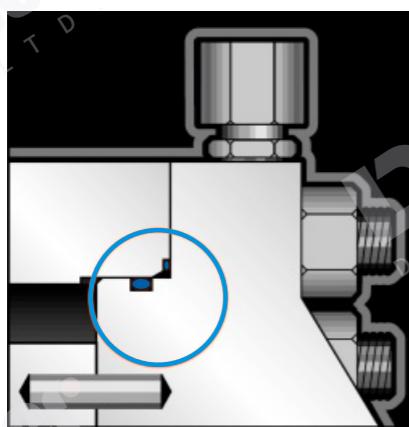

#### EMERGENCY SEAT SEAL

Special sealants may be injected thru fittings that are located on the adapter flanges to restore sealing integrity if seat sealing surface is damaged. A second internal check valve provides backup to the fitting.

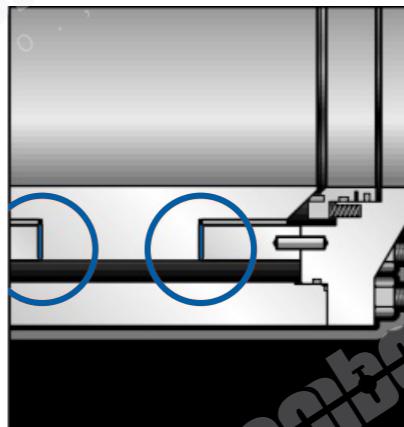

#### EMERGENCY SEALANT INJECTION SYSTEM

The Sealant Injection System located on the bonnet can be utilized in case of emergencies, o-ring damage, or if stem leakage occurs.

#### DOUBLE SEALED ENVELOPE CONNECTIONS

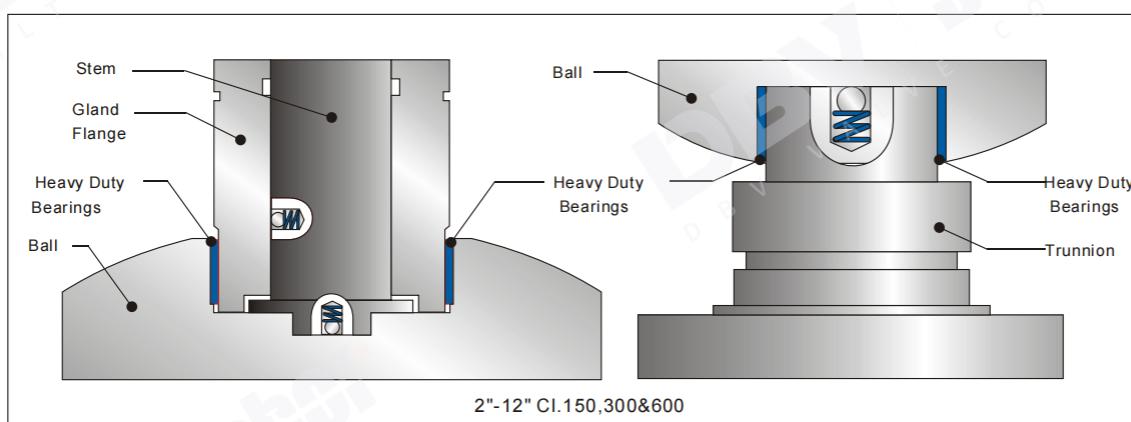

Double o-rings or a combination of an o-ring and firesafe gasket on body/adapter connections to ensure positive sealing. This makes these valves suitable for above or below ground service.

#### HEAVY DUTY BEARINGS

Trunnions are supported by heavy duty Teflon coated Steel Bearings. Thrust load on the ball is supported by large trunnions mounted within captured trunnion blocks, resulting in low operating torque and seat wear.

6"-12" CI.900 & 1500  
14"-24" CI.150,300 & 600

#### ANTISTATIC DEVICE

A spring between the trunnion and the ball or between the stem and the gland plate permits electrical continuity between all valve components.

**APPLICABLE STANDARDS**

The following list contains the most important applicable standards for ball valves. DBV may be designed.

**API-AMERICAN PETROLEUM INSTITUTE**

- 6D Specification for pipeline valves,
- RP6F Recommended practice for fire testing of valves,
- 6FA Specification for fire testing of valves,
- 598 Valve inspection and test.
- 605 Large diameter carbon steel flanges.
- 607 Fire test for soft seated quarter-turn valves.

**ASME/ANSI-AMERICAN NATIONAL STANDARD INSTITUTE**

- B 16.5 Steel pipe flanges and flanged fittings.
- B 16.10 Face-to-face and end-to-end dimensions of ferrous valves.
- B 16.25 Butt welding ends.
- B 16.34 Steel valves-Flanged and butt welding ends.
- B 16.47 Steel Flanges.
- B 31.3 Chemical plant and petroleum refinery piping.
- B 31.4 Liquid petroleum transportation piping systems.
- B 31.8 Gas transmission and distribution piping systems.
- B 46.1 Surface texture.

**ASTM-American Society for Testing Materials**

Consult factory for details.

ISO-International Organization for Standardization

ISO 9001:2000 Quality systems-Model for quality assurance in design/development, production, installation and servicing.

ISO 5211 Top works Mounting Dimensions

ISO 15156 For use INH<sub>2</sub>S containing environments in oil and gas production

**Manufactured and tested in accordance with other international standards on request.**

**British Standard**

- BS 1503 Specification for steel forgings for pressure purposes.
- BS 1504 Specification for steel castings for pressure purposes.
- BS 1560 Steel pipe flanges and flanged fittings.
- BS 2080 Face-to-face, center-to-face, end-to-end, and center-to-end dimensions of flanged and butt-welding end steel valves for the petroleum, petrochemical and allied industries.
- BS 4504 Flanges and bolting for pipes, valves and fittings
- BS 5146 Inspection and test of steel valves for the petroleum, petrochemical and allied industries.
- BS 5351 Steel ball valves for the petroleum, petrochemical and allied industries.
- BS 5750 Quality system.
- BS 6755 Testing of valves.

**MSS-Manufacturers Standardization Society**

- SP6 Standard finishes for contact faces of pipe flanges and connecting-end flanges of valves and fittings.
- SP25 Standard marking system for valves, fittings, flanges and unions.
- SP45 Bypass and drain connection standard.

**NACE-National Association of Corrosion Engineers**

- MR 0175 Sulfide stress cracking resistant metallic materials for oil field equipment.

**DBV THREE PIECE TRUNNION PARTS CONFIGURATION 2"**  
**FP-36"FP, CLASS 150,300,600,900,1500&2500**

## Ball Valve

### THREE PIECE TRUNNION MOUNTED BALL VALVE

- Three Piece Body, FullPort or Reduced Bore
- Trunnion Mounted, Fire Safe, Blow-out Proof Stem
- Anti-static Device, Cavity Relieving Seats
- NACE MR-01-75, Optional Locking Device
- Designed to ASME B16.34, API 6D

Face to Face	API 6D
End Flange	ASME B16.5
Buttweld	ASME B16.25
Class	ASME CL150/300

## METHOD OF CALCULATING FLOW

The Flow Coefficient "Cv" of a valve is the flow rate of water (gallons/minute) through a fully opened valve, with a pressure drop of 1 psi across the valve. To find the flow of liquid through valve from the Cv, use the following formulas:

## LIQUID FLOW

$$Q_L = \text{flow rate of liquid (gal./min.)}$$

$$\Delta P = \text{differential pressure across the valve (psi)}$$

$$G = \text{specific gravity of liquid (for water, } G=1)$$

$$Q_L = Cv \sqrt{\frac{\Delta P}{G}}$$

## GAS FLOW

$$Q_g = \text{flow rate of gas (CFH at STP)}$$

$$P_2 = \text{outlet pressure (psia)}$$

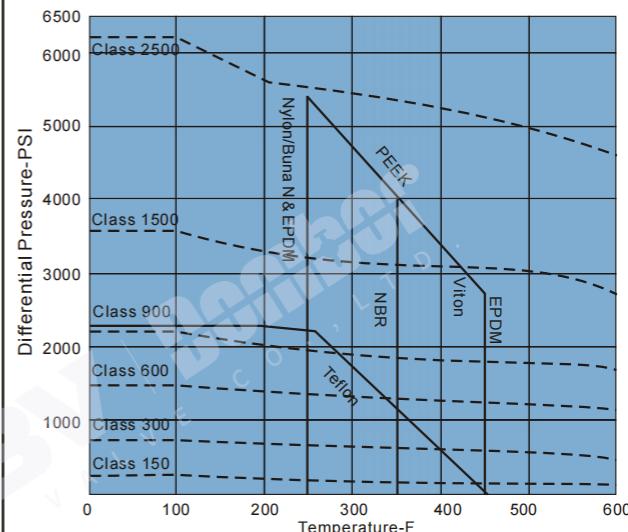

$$g = \text{Specific gravity of gas (for air, } g = 1.000)$$

$$Q_g = 61Cv \sqrt{\frac{P_2 \Delta P}{g}}$$

For non-critical flow

$$\left\{ \frac{\Delta P}{P_2} < 1.0 \right\}$$

## PRESSURE TEMPERATURE CHART (CARBON STEEL)

# Ball Valve

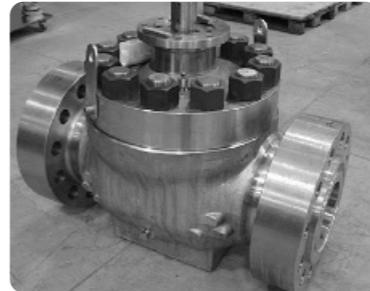

## TOP ENTRY BALL VALVES

This top entry valve with a one-piece trunnion supported ball conforms to API specifications 6A, 6D and ANSI B16.34. All seats are retained in metal holders which are spring-loaded against the ball for low pressure fire-safe sealing.

2" thru 16" class 150, 300 and 600,  
2" thru 12" class 900, 1500 and 2500.

## GENERAL DESIGN FEATURES

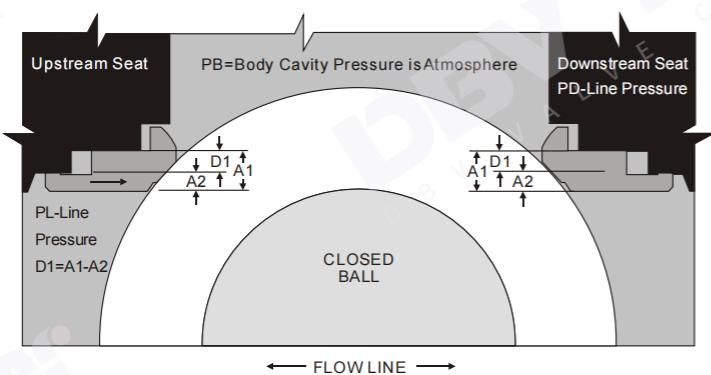

- One-piece flange top-entry trunnion design
- Double block and bleed
- One-piece ball and stem assures precise positioning
- Anti blowout one-piece ball/stem design
- O-rings plus fire-safe packing prevents leakage
- Corrosion resistant low friction bearings
- Inconel wave springs provide upstream and downstream sealing
- Stainless Steel Sealant injection fittings for emergency stem of seat sealing
- Inline repairable due to reasonable seat retainer design
- Minimized torque required to open and close valve
- Anti-static grounding between ball, stem and body
- Integral top works direct mounting pad
- ANSI B16.34
- API 6D, API 6A, 607 and 6FA
- NACE MR 0175
- CE Marked (P.E.D. 97/13/EC, Cat.3)

## FIRE SAFE FUNCTION

In case of fire and seat construction damage, fire-safe requirements are accomplished with automatic metal-to-metal positive sealing.

## TECHNICAL SEATING FEATURES

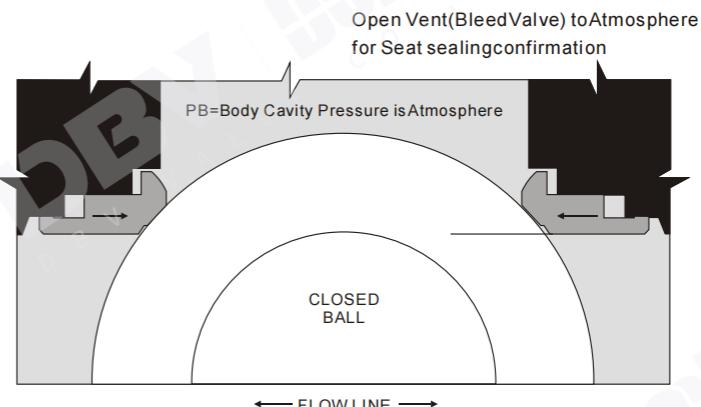

## SELF RELIEVING SEAT DESIGN

**Upstream Seat:** The difference in the area ( $D_1$ ) times the line pressure creates a "piston effect" which forces the seat against the ball surface. Also the springs behind the seat add the force to the seat which keeps the seat in contact with the ball surface by providing the tight seal.

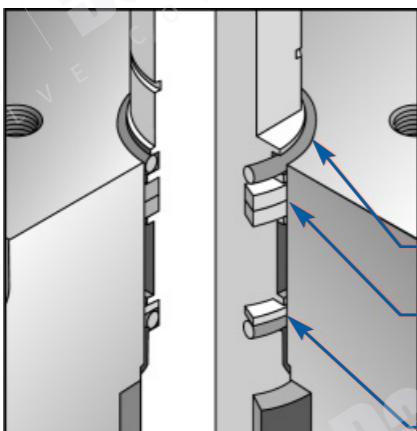

**Downstream Seat:** When the body cavity pressure exceeds the spring pressure, automatic pressure relief will occur by relieving the body cavity pressure past the downstream seat. This eliminates the need for the body relief valve.

## DOUBLE BLOCK AND BLEED

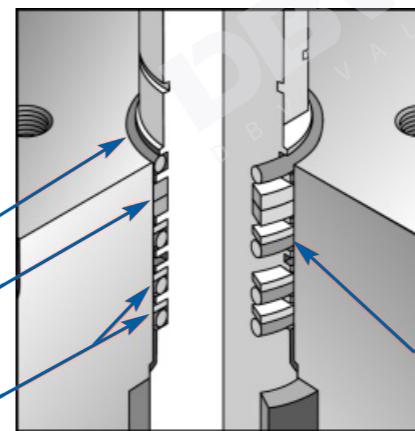

The double block and bleed condition is available in all seat design configurations. When the ball is in the closed position the body cavity pressure may be drained down to 'zero' by opening the bleed valve and draining the fluid by removing the drain plug. Each seat works independently assuring tight shut off seal against ball on the upstream and downstream side.

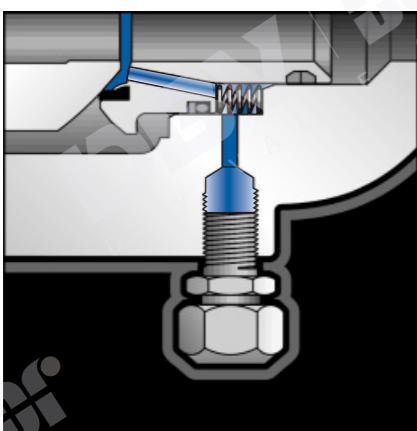

## DESIGN FEATURES

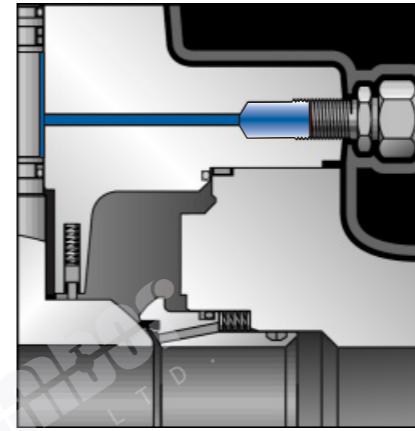

## FIRESAFE STANDARD SEAL

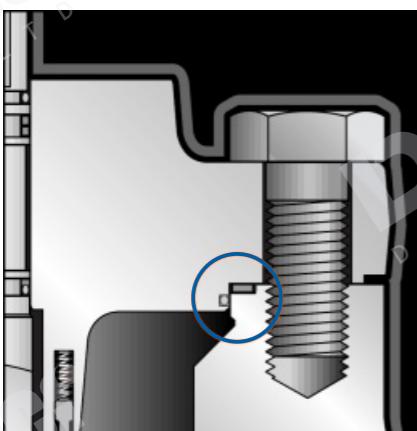

## FIRESAFE STANDARD SEAL

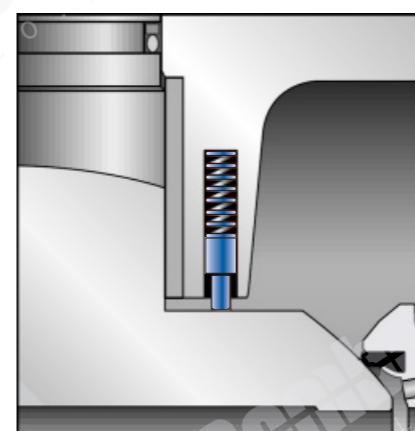

## EMERGENCY SEAT SEAL

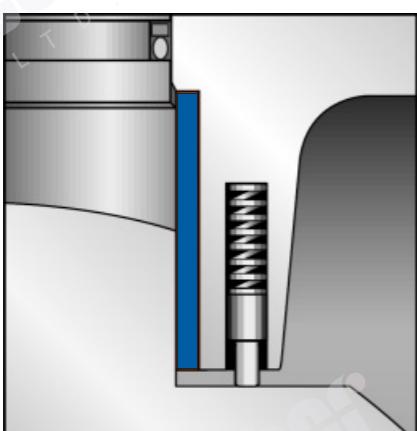

## EMERGENCY SEALANT INJECTION SYSTEM

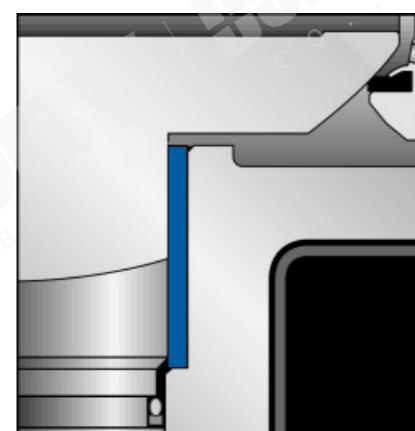

## DOUBLE SEALED ENVELOPE CONNECTIONS

## APPLICABLE STANDARDS

The following list contains the most important applicable standards for ball valves DBV valves may be designed.

### API-American Petroleum Institute

- Spec.6A Specification for wellhead and Christmas tree equipment.
- Spec.6D Specification for pipeline valves,
- Spec.RP6F Recommended practice for fire testing of valves,
- Spec.6FA Specification for fire testing of valves,
- Std.598 Valve inspection and test.
- Std.605 Large diameter carbon steel flanges,
- Std.607 Fire test for soft seated quarter-turn valves.

### ASME/ANSI-American National Standard

- B 16.5 Steel pipe flanges and flanged fittings.
- B 16.10 Face-to-face and end-to-end dimensions of ferrous valves.
- B 16.25 Butt welding ends.
- B 16.34 Steel valves-Flanged and butt welding ends.
- B 31.3 Chemical plant and petroleum refinery piping
- B 31.4 Liquid petroleum transportation piping systems.
- B 31.8 Gas transmission and distribution piping systems.

### ASTM-American Society For Testing Materials

#### British Standard

- BS 1503 Specification for steel forgings for pressure purposes.
- BS 1504 Specification for steel castings for pressure purposes.
- BS 1560 Steel pipe flanges and flanged fittings.
- BS 2080 Face-to-face, center-to-face, end-to-end, and center-to-end dimensions of flanged and butt-welding end steel valves for the petroleum, petrochemical and allied industries.

**Manufactured and tested in accordance with Other international standards on request.**

#### British Standard-cont

- BS 4504 Flanges and bolting for pipes, valves and fittings.
- BS 5146 Inspection and test of steel valves for the petroleum, petrochemical and allied industries.
- BS 5351 Steel ball valves for the petroleum, petrochemical and allied industries.
- BS 5750 Quality system.
- BS 6755 Testing of valves.

#### EC-EUROPEAN COMMUNITY

CE marked (p.e.d.97/23/ec.cat.3)

ISO-International Organization for Standardization  
ISO 9001:2000 Quality systems-Model for quality assurance in design/development, production, installation and servicing.

#### MSS-Manufacturers Standardization Society

- SP6 Standard finishes for contact faces of pipe flanges and connecting-end flanges of valves and fittings.
- SP25 Standard marking system for valves, fittings, flanges and unions.
- SP44 Steel pipeline flanges.
- SP45 By-pass and drain connection standard.
- SP55 Quality standard for steel castings-visual method.
- SP61 Hydrostatic testing of steel valves.
- SP72 Ball valves with flanged or butt-welding ends for general service.

#### NACE-National Association of Corrosion Engineers

- Me0175 Sulfide stress cracking resistant metallic materials for oil field equipment.

## Ball Valve

### TOP ENTRY BALL VALVE PRESSURE TEMPERATURE AND FLOW DATA

Pressure Temperature Chart Notes: Consult factory for service above 325° F

\*For chemical service. \*\* For water and steam service only.

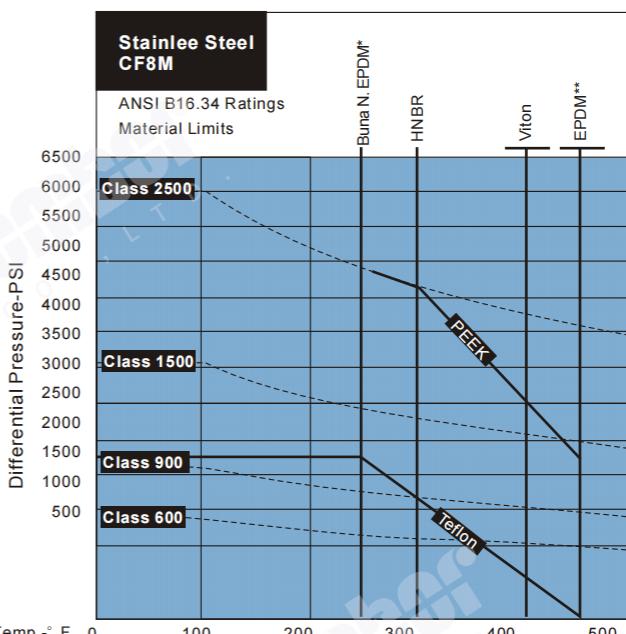

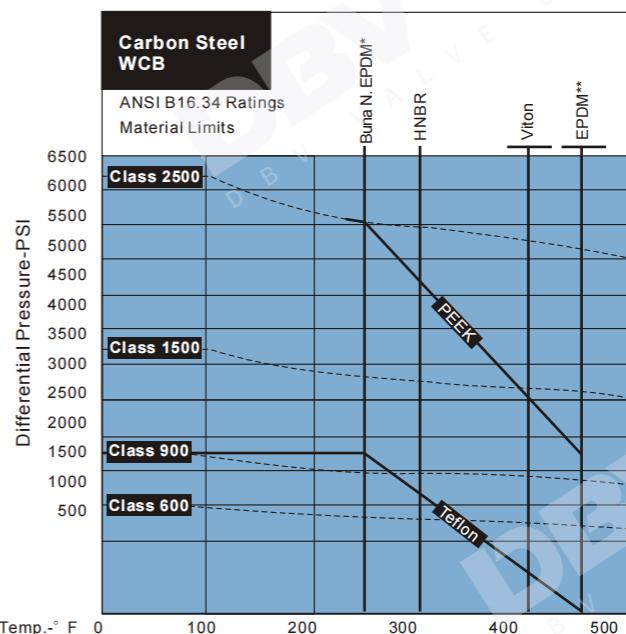

### LOW TEMPERATURE LIMITS

Body Material	° F	° C
WCC	-20°	-28.9
LCC	-50°	-45.6
WCB	-20°	-28.9
CF8M	-50°	-45.6

Seat Material	° F	° C
Teflon	-50°	-45.6
PEEK	-50°	-45.6

Seal Material	° F	° C
Buna N	-30°	-34.4
Low Temp Buna N	-50°	-45.6
Viton	-20°	-28.9

Seal Material	° F	° C
Viton	+10°	-12.2
NBR	-40°	-40
EPDM	-50°	-45.6

### FLOW COEFFICIENT (CV), API 6D & ANSI B16.34

### METHOD OF CALCULATING FLOW

The Flow Coefficient "Cv" of a valve is the flow rate of water (gallons/minute@ 60° F) through a fully opened valve, with a pressure drop of 1 psi across the valve. To find the flow of a liquid or gas through a valve from the Cv, use the following formulas:

#### Liquid Flow

QL=flow rate of liquid(gal./min.)

△P=differential pressure across the valve(psi)

G = Specific gravity of liquid (for water, G=1)

$$Q_L = Cv \sqrt{\frac{\Delta P}{G}}$$

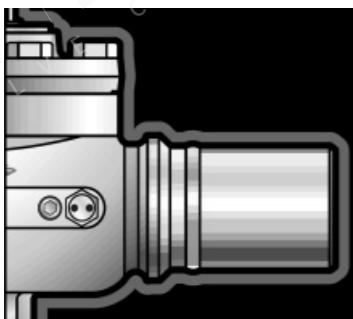

#### Gas Flow

Qg=flow rate of gas(CFM at STP)

P<sub>2</sub>=outlet pressure (psi)

g = Specific gravity of gas (for air, g=1.000)

$$Q_g = 61Cv \sqrt{\frac{P_2 - \Delta P}{G}} \quad \left\{ \begin{array}{l} \text{For non-critical flow} \\ \frac{\Delta P}{P_2} < 1.0 \end{array} \right.$$

**VARIANTS****PUPS**

Butt Weld valves may be supplied with transition pieces (PUPS) to avoid any risk of seat and seal damage during welding and post weld heat treatment operations. Length of pups and type of pipe and grade to be specified by customer.

**EXTENSIONS**

DBV top entry ball valves are available for below ground or buried service with fully operational extensions to meet your specifications. Body Bleed and Sealant Injection functions are maintained along with total valve control by manual or powered actuators. Extension dimensions for Gear Operator or Actuator are given with reference from the valve center line to the center of hand wheel.

**ACTUATORS**

The bonnet design of DBV Top Entry Ball Valves permits easy adaptation to mount manual, electric, hydraulic, or pneumatic actuators.

**METAL SEATED BALL VALVES**

DBV Top Entry Metal Seated ball valves have been designed to provide a reliable, efficient and safe method to handle services where high temperatures and/or the presence of solid particles in the fluid make it impossible, or not recommended, to use soft seated ball valves.

**SUB-SEA OPTIONS:** Sub-Sea valves are optionally available upon request

**INSTALLATION****FLANGE END (RF & RTJ):**

Top Entry Ball Valves may be mounted in either vertical or horizontal piping systems. The stem may be positioned vertically to horizontally.

Mating flanges must be correctly aligned. Alignment includes bolt hole placement, parallelism, and perpendicularity.

Use proper size gasket or RTJ metal seal. Flange studs or bolting must be correct size and properly tightened.

Properly constructed piping systems do not cause undue stress in valve assemblies. Valves are not intended to make up for insufficient pipe tolerances.

**Caution:** During the welding process, valve body temperatures should be monitored around the circumference at a location inline with the sealant injection fittings. The temperatures at this plane should be checked with Temperature Stick or other reliable temperature indicator and not allowed to exceed 300 °F. This precaution is necessary to assure that non-metallic seals do not suffer heat damage. Tack weld valve in position and check for proper alignment.

Finish weld following proper weld procedure for material grade and condition, and the above Caution.

**WELD ENDS (WE):**

Keep ball in open position prior to installation/welding of DBV Top Entry Weld End Ball Valve.

Place the valve in position by aligning Weld Ends to the pipe.

Prior to welding it is imperative that all welding surfaces be clean from contamination such as dirt, dust and grease which may affect weld performance.

## Ball Valve

### DBV FULL WELDED BALL VALVE DESIGN FEATURES

#### SEAMLESS CARBON STEEL BODY

All welded ball valve body is compact and streamline for maximum strength and minimum weight.

#### STAINLESS STEEL BALL

The stainless steel ball is produced to extremely tight tolerances, and ground to within microns of perfect roundness to assure smooth operations and a tight seal.

#### OPTIONAL LOCKING DEVICE WITH POSITION INDICATOR

Instantly readable locking device that shows the valve operating position.

#### STEM BEARINGS

These bearings are produced from an electrically conductive material that provides a safety grounded stem to eliminate static build-up and potential arcing.

#### SEAT SEALS

The special 25% carbonized PTFE (Teflon) (G-453) seals tightly, yet allows easy, low-torque, quarter-turn operation.

#### STAINLESS LABELS

Every label is permanently stamped, color coded with traceable serial numbers for each valve.

#### SEAT QUALITY FEATURES

Do not absorb water, and does not expand  
Chemical resistant  
High friction characteristics  
Good temperature stability  
Tested and approved up to 250°C

#### DBV FULL WELDED BALL VALVES GENERAL FEATURES

Uni-body Top Entry  
Double Block and Bleed  
Fire Safe, Anti-static, Stem Blow-out  
Optional Locking Device and Position Indicator  
Size Ranges: 1/2" through 16" (DN15 through DN400)  
Pressure Ratings: ASME Class 150 through Class 900 (PN10 through PN150)  
Standard Materials Ranges: Cast Carbon Steel, Stainless Steel, Alloy Steel etc

**DBV SERIES DOUBLE BLOCK AND BLEED BALL VALVE  
CHARACTERISTICS**

Double Block and Bleed Valves with double fixed ballshinged on supports, and floating metal or soft seats.

Central Needle Vent Valve.

Pressure Range: from ASME Class 150 to ASME Class 2500.

Temperature range:

from -46 to 450 .

Side Entry Forged Steel Valves.

On request, Top-Entry design.

Low pressure loss through the valve.

Low actuation torque.

"CE" marking in compliance with

PED Directive 97/23/EC.

Full bore or Reduced bore.

Different kinds of end connections

(RF/RTJ Flanges, Butt Weld, Clamp Connection, Socket Welding).

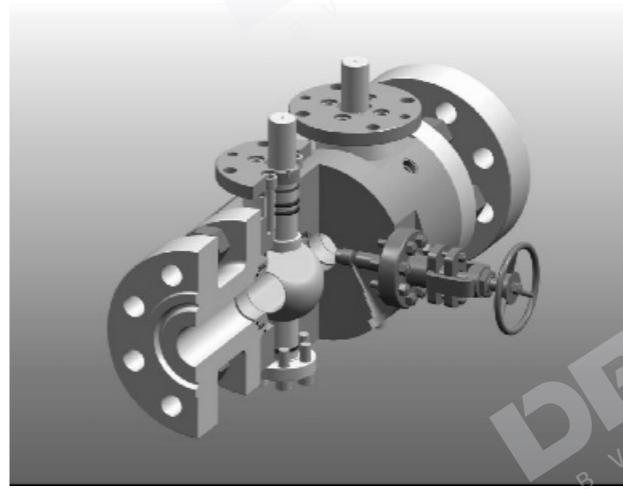

Wide availability of materials depending on the specifications (carbon steel, stainless steel or Duplex steel for service in corrosive environments, Chrome-Molybdenum alloy steel for high temperature service, etc.).

Materials with anti-corrosion properties according to NACE MR 0175.

On request, seat pocket area overlay, seal area overlay, or completed cladding on wetted surface (welded overlays in Inconel 625, Stainless Steel 316, etc., or Electroless Nickel Plating).

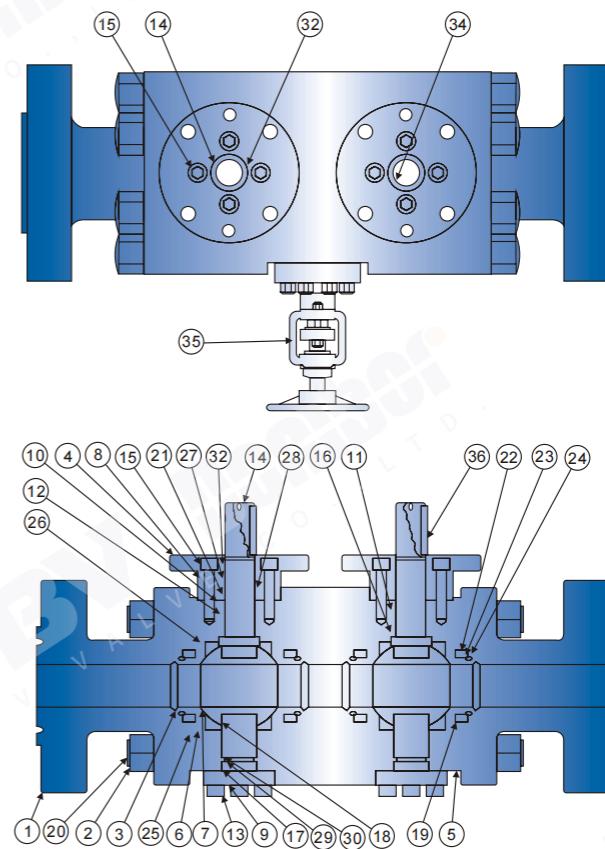

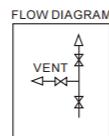

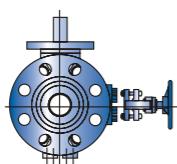

Suitable for manual (wrench or gear) or motorized actuation (hydraulic, pneumatic, gas-over-oil or electric actuator).

**COMBINED BALL VALVES  
SIDE ENTRY AND TOP ENTRY BOLTED BONNET**

**MAIN PARTS**

## Ball Valve

### DOUBLE BLOCK & BLEED BALL VALVE

- Double Block and Bleed, DoubleBall
- Full or Reduced Port, FireSafe, Blow-out ProofStem
- Anti-static Device, Cavity Relieving Seats
- NACE MR-01-75, Optional Locking Device
- Designed to ASME B16.34, API 6D

Face to Face	API 6D
End Flange	ASME B16.5
Buttweld	ASME B16.25
Class	ASME CL150~900
